JEANNE RATHER, MBA, MHA, MSDS

Seattle, WA | jeanne.rather@gmail.com

ENTERPRISE DATA PROGRAM MANAGER | TECHNICAL PROGRAM MANAGER

MDM Implementation Delivery | Vendor & Systems Integrator Accountability | Multi-Workstream Governance | Sponsor Risk & Steering Committee Enablement

Senior technology program manager with 17+ years leading complex, multi-workstream enterprise data, analytics, systems, and operational programs across highly matrixed organizations. Experienced in integrated planning, systems-integrator and vendor accountability, sponsor-level risk and issue management, decision-ready governance, data quality and reconciliation, and delivery from requirements through adoption. MSDS-credentialed with working fluency across SQL, BI, data modeling, pipelines, and data-governance concepts, with hands-on platform and metric configuration and credible partnership with engineering, analytics, platform, and business teams.

Core Competencies

- Complex Technology Program & Project Management
- Master Data Management (MDM) Program Delivery
- Enterprise Data Platform Programs & Pilots
- Systems Integrator (SI) & Vendor Accountability
- Multi-Workstream Program Coordination
- Managing Dedicated & Part-Time Workstream PMs
- Steering Committee Enablement & Managing Up
- Delivery Tooling (Jira, Confluence, Smartsheet, MS Project)
- Sponsor-Level Risk, Issue & Communications Ownership
- Deliverable Definition, SOW & Acceptance Criteria
- Integrated Scheduling, Dependency & Critical-Path Management
- Scope, Change & Budget Control
- RAID Logs, RACI & Escalation Path Design
- Data Governance, Ownership & Stewardship
- Data Definitions, Lineage, Quality & Reconciliation
- Cutover, Hypercare & Adoption Readiness
- Technical Fluency (SQL, BI, Data Modeling Concepts)
- Cross-Functional Stakeholder Influence & Change Management

SELECTED EXPERTISE

- Enterprise Data Platforms • MDM Delivery • SI/Vendor Governance • Integrated Plans & Critical Path • RAID/RACI • Data Governance & Quality • Executive Reporting • Requirements & Backlog • Cutover/Adoption • Budget & Resource Planning

PROFESSIONAL EXPERIENCE

APPLE INC. | Seattle, WA (Remote) 08/2024 – Present

Program Manager – Enterprise Data & Technology Program Delivery (Contract)

- Manage complex technology programs across a large, highly matrixed organization, owning the integrated schedule, dependency map, and delivery cadence that keep concurrent engineering, analytics, and vendor workstreams sequenced against committed milestones rather than drifting into competing local priorities.
- Own third-party and vendor delivery accountability end to end — defining scope and deliverable acceptance criteria up front, tracking committed dates against actuals, escalating slippage while correction is still possible, and holding partner teams to measurable results rather than to status narrative.
- Serve as the single point of proactive risk, issue, and communications management on behalf of program sponsors, maintaining the live register with quantified impact, probability, owner, and mitigation, and surfacing decisions before they harden into blockers instead of reporting them after impact.
- Prepare the governance materials that let leadership decide on time, framing the objective, options, trade-offs, cost of deferral, and recommendation so review bodies leave each session with resolved questions, named owners, and committed dates rather than another cycle of deferral and rework.
- Govern authoritative data and metric definitions with analytics and engineering partners, documenting ownership, calculation logic, and source of record for every measure so leadership reporting reconciles to one trusted version instead of fragmenting across competing extracts and shadow spreadsheets.

- Run intake, requirements capture, and backlog prioritization across functional partners, translating ambiguous business intent into clear, testable specifications and sequencing delivery so the highest-value scope lands first within fixed capacity, budget, and dependency constraints.
- Own budget forecasting and resource planning for the program, modeling cost and capacity scenarios, tracking spend against forecast, and giving sponsors transparent, regularly refreshed views of financial and delivery risk that directly inform investment, vendor, and staffing decisions.
- Drive adoption and operational readiness for new platforms and reporting workflows, coordinating cutover sequencing, communications, documentation, training, and post-launch support so delivered capability is genuinely used in daily operations rather than stalling at technical go-live.

TRAC ASSOCIATES | Seattle, WA
08/2024 – 10/2025

Senior Program Manager – Multi-Stakeholder Program Delivery & Governance (Contract)

- Led delivery for complex, multi-party programs spanning several concurrent workstreams that each carried their own delivery lead, owning the integrated plan, milestone structure, and cadence that held distributed teams to one sequenced schedule and a shared definition of done.
- Held external partners, funders, and delivery vendors accountable to committed outcomes, defining deliverable acceptance criteria before kickoff, reviewing progress against evidence rather than assertion, and escalating variance early enough that corrective action still changed the outcome.
- Managed up to multiple steering and decision-making bodies simultaneously, tailoring each briefing to what that body could actually approve and packaging findings, risks, and recommended actions so decisions landed inside the window the delivery schedule genuinely required.
- Owned proactive risk and issue management on behalf of program sponsors, maintaining a live register with quantified impact, probability, owner, and mitigation, and running the escalation path that kept small schedule deviations from compounding into missed external commitments.
- Defined program metrics and leading indicators and built the reporting that tracked participation, throughput, and outcomes, partnering with analytics support to validate source data and reconcile discrepancies before results reached leadership or external funding stakeholders.
- Established a formal intake and prioritization framework for reporting and system change requests, replacing ad hoc verbal asks with a documented queue that made trade-offs visible and gave every requester transparent status, named owner, and an expected delivery date.
- Owned budget and resource planning across program delivery, monitoring spend against forecast, modeling capacity trade-offs as priorities shifted, and giving leadership transparent, regularly updated views of cost, capacity, and delivery risk in every reporting cycle.
- Led change management and adoption for new processes and platforms across a geographically distributed team, building the communication cadence, training, and office hours that converted launches into consistent daily practice rather than short-lived surface compliance.

CLASSIC IMPRESSIONS | Seattle, WA
01/2023 – 08/2024

Operations & Program Manager – Systems, Vendor & Process Delivery

- Directed cross-functional operations spanning intake, production workflow, and delivery, mapping every handoff and system touchpoint to expose breakpoints and standardizing the processes that kept concurrent projects moving predictably under shifting demand and compressed timelines.
- Managed vendor and supplier relationships end to end, evaluating options against cost, quality, and lead time, structuring agreements with explicit deliverables and service expectations, and holding partners accountable to committed dates as volume and priorities shifted across the year.
- Built and maintained operational dashboards and status reporting that gave leadership real-time visibility into pipeline, capacity, and turnaround, defining the underlying metric logic and validating inputs so reporting reflected actual measured throughput rather than anecdote.
- Reconciled data across billing, production, and operational systems, identifying duplicate, missing, and conflicting records and establishing the definitions and controls that made one record the authoritative version for reporting and every downstream operational decision.
- Led process-improvement and workflow-automation initiatives, gathering frontline input, sizing each opportunity by effort against impact, and coordinating the change management and training that made more efficient workflows stick instead of reverting to legacy habits after launch.

- Coordinated capacity and resource planning across teams, balancing workload against fluctuating demand, reallocating effort as priorities shifted, and surfacing bottlenecks early enough that delivery commitments were met without compromising quality or overloading the team.
- Standardized documentation, intake forms, and reporting templates that improved consistency, shortened onboarding for new team members, and created a durable operational backbone the broader team relied on as the operation scaled and personnel changed across roles.
- Partnered with ownership on business planning, budget tracking, and performance review, providing clear, regularly refreshed views of operational health, cost, and risk that informed prioritization, staffing, and investment decisions throughout the engagement.

LARGE-SCALE TECHNOLOGY ORGANIZATION | Dallas, TX
10/2020 – 01/2023

Senior Program Manager – Workforce Planning & Labor Forecasting Systems

- Led workforce-planning and labor-forecasting programs across a large, highly matrixed operations organization, owning the multi-workstream plan, dependency tracking, and delivery cadence that moved model design, tooling, and rollout from concept through network-wide adoption.
- Cut planning-cycle time by roughly 40% by redesigning the end-to-end forecasting workflow and dashboard architecture with analytics and engineering partners, then driving the change through to validated production use rather than stopping at an approved design document.
- Served as the translator between operational leadership and hands-on data engineering and analytics teams, converting business questions into structured requirements and acceptance criteria, prioritizing the backlog, and co-developing sprint plans that consistently held delivery dates.
- Established governance standards for metric definitions, query documentation, and reporting reproducibility, assigning named ownership for each measure and running the review that kept definitions consistent as new source systems and consumers joined the reporting ecosystem.
- Ran rigorous data validation and reconciliation across integrated source systems, tracing discrepancies to root cause and correcting upstream logic so leaders acted on reconciled numbers instead of relitigating whose extract was right at the start of every business review.
- Produced executive-level business reviews and briefings that framed objective, insight, and recommended action, explaining complex analytic findings to non-technical audiences and accelerating alignment across a multi-stakeholder, matrixed decision-making environment.
- Managed budget and resource trade-offs within the planning function, modeling cost and capacity scenarios and giving senior stakeholders transparent views of spend, forecast accuracy, and delivery risk to support investment decisions under sustained high-pressure conditions.
- Drove adoption of new planning tools and dashboards through structured enablement, gathering frontline and manager feedback, feeding prioritized enhancements back into the backlog, and delivering the training that moved teams to confident, self-sufficient daily use.

US RENAL CARE | Dallas, TX
04/2018 – 09/2020

Regional Program Manager – Regional Operations, Systems & Quality Programs

- Directed operations and quality program management across 10 facilities in a regulated, full-risk environment, owning the regional plan, escalation path, and reporting cadence that held multiple concurrent improvement workstreams accountable to committed milestones and outcomes.
- Reduced emergency supply usage by roughly 30% by mapping the ordering and inventory process end to end, redesigning the workflow with clinical, operational, and supply-chain partners, and driving the change through to sustained adoption across every facility in the region.
- Lifted patient-satisfaction scores by roughly 15% by defining leading indicators, building the performance dashboards that tracked them, and converting results into prioritized improvement plans with named owners and committed dates rather than open-ended recommendations.
- Managed third-party vendors and supply partners against defined service and delivery expectations, tracking performance to agreement terms, escalating shortfalls promptly, and renegotiating scope where cost, reliability, or lead time no longer met regional operating needs.
- Executed detailed validation and reconciliation across clinical, operational, and reporting systems, identifying duplicate and conflicting records and establishing the definitions and controls that made regional reporting consistent and defensible under external review.

- Delivered executive and payer-facing performance reporting that framed results, root-cause findings, and recommended actions, influencing internal leadership and external stakeholders to fund and prioritize the highest-impact improvement initiatives across the region.
- Owned budget and resource planning for the region, monitoring spend against forecast, modeling capacity trade-offs, and giving leadership transparent, regularly updated views of cost, capacity, and operational risk that directly informed staffing and investment decisions.
- Trained and enabled frontline staff on new workflows and reporting tools through structured working sessions and office hours that drove adoption, surfaced practical process improvements, and sustained consistent execution across all 10 facilities in the region.

DAVITA KIDNEY CARE | Dallas, TX
05/2008 – 03/2018

Senior Program Operations Director – Multi-Site Operations, Systems & Quality Programs

- Set direction and owned execution for operations and quality programs across 15 facilities and 500–600 staff, running a portfolio of concurrent workstreams with their own leads and holding each accountable to one integrated plan, milestone set, and leadership reporting cadence.
- Improved compliance by roughly 20% by defining leading indicators, building and governing the regional performance-dashboard and metric ecosystem, and running the validation that made leaders willing to act on the numbers instead of maintaining parallel shadow spreadsheets.
- Improved patient-satisfaction scores by roughly 25% by redesigning interdisciplinary care- and case-coordination workflows for the highest-complexity populations and managing the change through to consistent execution across the full multi-site region over the period.
- Served as the central integrator between operational leadership and IT, analytics, and reporting teams, translating strategic intent into concrete system, workflow, and reporting requirements and prioritizing the enhancement intake that mattered most to frontline delivery.
- Led rollout and adoption of new clinical-quality and reporting platforms, coordinating internal and vendor delivery partners, sequencing cutover across sites, and building the training and feedback loops that carried each launch from go-live to sustained operational use.
- Owned governance of master data and metric definitions across the region, documenting ownership, calculation logic, and source of record so results reconciled across systems and stayed consistent as facilities, staffing, and external reporting requirements changed.
- Delivered executive reporting and business reviews on operational health, cost, capacity, and quality, framing findings and recommended actions to influence senior leadership and secure the funding and headcount required for priority initiatives across the region.
- Owned budget management and resource planning across the multi-site program, modeling cost and capacity scenarios and providing transparent, regularly refreshed views of spend, capacity, and risk that informed staffing and investment decisions year over year.

EDUCATION & CERTIFICATION

Master of Science in Data Science (MSDS), University of Phoenix
Data Analytics & Business Intelligence Certificate, University of Phoenix
Master of Business Administration (MBA), University of Phoenix
Master of Healthcare Administration (MHA), University of Phoenix
Bachelor of Science in Nursing (BSN), St. Paul University, Philippines
Securing SQL Server 2012, LinkedIn (Jul 2024)

COMPETENCIES & TECHNICAL SKILLS

Program & Delivery Management: Complex technology program and project management, enterprise data program delivery, multi-workstream coordination, vendor and systems-integrator accountability, deliverable definition and acceptance criteria, integrated scheduling and dependency tracking, critical path, scope and change control, RAID logs, RACI, escalation path design, cutover and adoption readiness, sprint and backlog prioritization; Jira, Confluence, Smartsheet, MS Project, Azure DevOps, SharePoint, Visio and Lucidchart. **Governance & Stakeholder Management:** Steering committee and governance-body enablement, managing up to executive decision-making bodies, sponsor-level risk, issue and communications ownership, executive

briefings and decision packages, executive storytelling, budget forecasting and spend tracking, resource and capacity planning, change management and adoption, cross-functional influence. **Data & Technical Fluency:** Data governance, master data and metric definitions, ownership and stewardship, data quality, validation and cross-system reconciliation, single-source-of-truth reporting, SQL (advanced querying and analysis), Power BI, Tableau, Looker, Hex, advanced Excel, Python and R (MSDS-grounded), data modeling and pipeline concepts, and platform and metric configuration.

ACHIEVEMENTS

- Cut planning-cycle time by roughly 40% by redesigning end-to-end forecasting workflows and dashboard architecture with analytics and engineering partners, then driving the change through to validated production use across a large, matrixed operations organization.
- Reduced emergency supply usage by roughly 30% at US Renal Care by mapping the ordering and inventory process end to end, redesigning it with clinical, operational, and supply-chain partners, and sustaining adoption across all 10 facilities in the region.
- Improved compliance by roughly 20% at DaVita by defining leading indicators and governing a validated performance-dashboard and metric ecosystem that leaders trusted enough to act on across a 15-facility region and 500–600 staff.
- Improved patient-satisfaction scores by roughly 25% at DaVita by redesigning interdisciplinary care- and case-coordination workflows and managing the change through to consistent execution across the full multi-site region.
- Lifted patient-satisfaction scores by roughly 15% across 10 US Renal Care facilities through prioritized, metric-driven improvement plans anchored in clearly defined leading indicators, named owners, and committed dates.
- Built single-source-of-truth reporting adopted by leadership across multiple organizations, replacing fragmented and conflicting extracts with reconciled, governed data carrying documented metric definitions and named ownership.
- Established governance standards for metric definitions, query documentation, and reporting reproducibility, keeping definitions consistent as new source systems and consumers joined the reporting ecosystem.
- Own budget forecasting, vendor strategy, and resource planning across a large, highly matrixed technology organization at Apple, running the forecasting and scenario analysis that inform portfolio investment decisions.
